Release 1.0

Samuel Quink

Feb 27, 2026

CONTENTS:

1 Modules	3
Python Module Index	5

Add your content using reStructuredText syntax. See the [reStructuredText](#) documentation for details.

MODULES

my_ping.ping(*dest, count, interval, size, timeout*)

Send ICMP echo requests to the specified destination and print the results.

@param dest: The destination host to ping @param count: Number of packets to send @param interval: Time interval between packets in seconds @param size: Size of the ICMP payload in bytes @param timeout: Timeout for each packet in seconds

my_traceroute.traceroute(*dest, numeric, queries, summary*)

Perform a traceroute to the specified destination.

@param dest: The destination host to trace @param numeric: If True, display numeric IP addresses instead of hostnames @param queries: Number of queries to send per hop @param summary: If True, display a summary of the traceroute results

helpers.calculate_checksum(*source_string*)

Calculate the checksum of the given source string.

@param source_string: The string to calculate the checksum for @return: The checksum value

helpers.create_packet(*seq, size*)

Create an ICMP echo request packet with the given sequence number.

@param seq: Sequence number for the ICMP packet @param size: Size of the ICMP payload in bytes @return: The complete ICMP packet ready to be sent
